# Reinaldo Landaeta

*FullStack Developer*

## CAREER OBJECTIVE

As a full-stack programmer, I specialize in software development, focusing on the analysis, design, and implementation of web applications. My expertise extends to enhancing and maintaining existing software solutions, where I leverage my problem-solving skills to optimize performance and functionality.

In addition to my technical proficiency, I hold a B2 level of proficiency in English, facilitating seamless communication with international teams and enabling me to effectively navigate technical resources in English. This linguistic capability has been instrumental in comprehending technical documentation and fostering collaboration with colleagues across geographical boundaries.

- Communication skills
- Bilingual skills

## WORK EXPERIENCE

**Fullstack Developer (freelancer)**

***Barbershop AB app***

- I have developed an appointment website for barbershops that allows users to schedule appointments, store them in the database and receive verifications by email. In addition, the platform sends notifications of scheduled appointments to barbers through their administrator accounts on the site. Users are free to select the date and time of their choice to be seen, and also have the option to make payments directly from the site.
